

THE DENTIST AI AVATAR SETUP

Clone your voice. Create your avatar. Turn a script into a video without filming every time.

THE STACK

ElevenLabs = clone your voice.

HeyGen = create your video avatar.

Use it for patient education, FAQs, reminders, and repeatable content.

STEP 1 - CLONE YOUR VOICE

1. Record a clean sample of yourself speaking naturally.
2. Open ElevenLabs.
3. Go to **Voices**.
4. Click the + icon.
5. Select **Instant Voice Clone**.
6. Upload or record your voice sample.
7. Save the voice.

You can now paste in a script and generate audio in your cloned voice.

TIP

Use a quiet room. Speak normally. Avoid music, echo, or background noise.

STEP 2 - CREATE YOUR AVATAR

Now create the video version of you.

1. Open HeyGen.
2. Go to **Avatars**.
3. Click **Clone a Real Person**.
4. Follow HeyGen's recording instructions.
5. Record and submit the short sample it requests.
6. Let HeyGen build your avatar.

STEP 3 - ADD YOUR VOICE

You have two options:

Simple: Use the voice clone created directly with your HeyGen avatar.

Advanced: Import your ElevenLabs voice inside HeyGen's voice settings.

HeyGen currently supports importing ElevenLabs voices through its third-party voice integration.

STEP 4 - MAKE THE VIDEO

1. Create a new video in HeyGen.
2. Select your avatar.
3. Select your cloned voice.
4. Paste in your script.
5. Generate the video.

WHAT TO USE IT FOR

Do not replace every real video with an avatar. Use it where repetition is the problem.

GOOD USES

- Patient FAQs
- Treatment education
- Post-op reminders
- Simple social media education
- Multilingual versions of the same message
- Repeatable videos your team needs often

DO NOT DO THIS

- Do not clone someone else's face or voice without permission.
- Do not use an avatar to mislead patients into thinking a message was personally recorded when that distinction matters.
- Do not upload patient information or PHI into content-generation tools.

THE SIMPLE WORKFLOW

Write script → Generate voice → Generate avatar video → Edit → Post

MOLAR

We test and use AI tools like these to make patient education easier to create and easier to understand.
